

INFORMER'S TTY COMPARISON

DISCRETE TTY SOLUTION

- Solution is four pieces instead of one, wasting valuable desktop space.
- Multiple pieces are harder to support with multiple vendors.
- Lacks adjustable output for instant recall recording.
- Ties up serial port that may be unavailable or unreliable.
- Has no interactive handset microphone off or handset speaker off capability, which could result in either no HCO or VCO capability or continuous noise when in ASCII mode.
- Relies on separate external pieces to stay connected and plugged into power.

INFORMER'S INTEGRATED TTY SOLUTION

- Solution is a one-piece design that resides inside of dispatcher's PC and supports the newer PCI bus technology, while saving desktop space.
- Has dedicated processor that keeps TTY modem functions completely separate from dispatcher's workstation.
- Supports two instant recall recording ports with adjustable outputs, also can be used as headset ports.
- Has HCO and VCO capability with silent operation when in ASCII mode.
- 3-way BAUDOT connections are more reliable by using microphone off command when not transmitting or speaking.
- Modem has passed ATIS TWIP test with 100% perfect score.
- Each modem is tested prior to shipment for data integrity and voice hits immunity.
