

## ALI CRT Display

### DESCRIPTION

Informer's automatic location identification (ALI) CRT display monitor is the industry standard for displaying a caller's location with more than 30,000 units deployed in PSAPs nationwide. The ALI CRT display is a cathode ray tube (CRT) display measuring six inches diagonally. The ALI display comes in two models, the M911 desktop model and the RM911 rack-mount model.

### APPLICATIONS

The Informer ALI CRT display connects to all major PSAP CPE equipment through a serial port (RS 232) connection. When a 9-1-1 call is received at the PSAP the caller's street address will be retrieved from the ALI database by the ALI Controller and is displayed on the Informer ALI display.

### FEATURES

- Easy-to-read, non-glare high-resolution display, with brightness control.
- Function keys that allow the operator to clear screen repeat screen and print screen.
- The small footprint saves much needed space on the dispatcher console.
